

Uponor

Uponor Smatrix thermostatic head

The integrated radiator control solution

Your benefits:

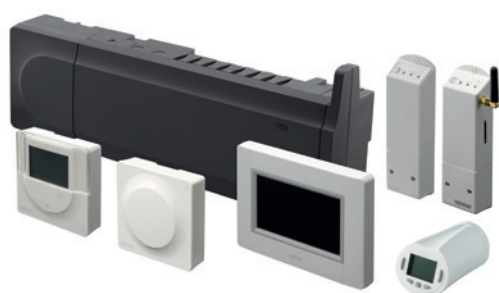

- Wireless control system: radiator and underfloor radiant system
- Broad coverage of applications: Integration with existing Smatrix Wave and Smatrix Wave PLUS system
- Versatile and easy to install: just plug-on the existing valve

A digital thermostatic head for radiator controls

Uponor Smatrix thermostatic head is an intelligent battery powered thermostat/valve actuator combination with an inbuilt silent step motor. Thanks to the availability of different adapters the thermostatic head fits to most available radiator connection valves. A high controls quality is secured due to the room and water temperature compensation. The digital thermostatic head **work** in combination with the existing **Smatrix Wave and Smatrix Wave PLUS** that make it the **advanced controls** for **mixed system installations**.

Key features:

- Control of temperature in room with radiator installation
- Setting via U@home module
- Wireless connection to Smatrix controller
- Choose between fully integrated measurement of room temperature or via Smatrix Wave and Smatrix Wave PLUS thermostats
- Fits to most available radiator connection valves
- Antifreeze programme available
