

**Outstanding insulation
performance.
Incredible flexibility.**

Uponor

Uponor Ecoflex VIP

➤ Not an evolution. But a pipe revolution.

Ecoflex VIP at a glance

- Reduce heat loss
- Reduce operational costs
- Reduce installation time and costs
- Reduce CO₂ emissions

Jacket pipe

Extremely flexible and durable

Soft insulation

Flexible and easy to install

PE-XA service pipe

The most robust pipe available

Centring profile

Clear identification of flow & return pipe

VIP insulation

Outstanding insulation performance

The new standard for local and district heating networks

District heating is becoming increasingly popular with municipalities, planners and construction companies. Particularly in urban areas, these networks are considered to be the energy distribution of the future. Local heating networks that operate at low-temperature levels are expected to have a very long service life – even exceeding 50 years. And saving the costs of boiler installation, operation and maintenance is an attractive added value for many property users.

Until now, pipes with the best heat loss performance for supplying heating and hot tap water in district heating networks have been very stiff and not as flexible as pipes insulated with soft foam. Imagine how much better it would be if there were a pipe that combined the best of both types of product.

At Uponor, we decided it was high time to create such a pipe. Taking our successfully established Ecoflex line as a starting point, we finally achieved a revolutionary pipe design that represents nothing less than a completely new product category.

Ecoflex VIP combines the best heat loss performance for flexible foam insulation pipes on the market with outstanding flexibility. By adapting the ground-breaking Vacuum Insulation Panel (VIP) technology, heat losses can be reduced by up to 60%. The flexible design and small diameter help to reduce the installation time of the pipes by up to 20% compared to hard foam insulated flexible pipes, and by more than double compared to steel pipes.

With Ecoflex VIP Thermo, it is possible to make energy distribution more sustainable while simultaneously speeding up installation processes. The safe and durable system can be used in house-to-house connections or entire local distribution networks. Future-proof your planning and build today's heating networks using tomorrow's technology – with the new standard in local heat distribution.

60%

Possible reduction of heat loss through VIP technology.

Ecoflex VIP

Our innovative pipe technology is available for heating and cooling networks with **Ecoflex VIP Thermo** and for warm tap water distribution with **Ecoflex VIP Aqua**.

➤ **Lowest lambda value. Exceptional insulation performance.**

Keep the heat where it belongs

Vacuum insulation panels have already proven to be one of the best insulation materials, as they are widely used for applications in healthcare, vehicles, construction and household appliances. By adapting this technology to Ecoflex VIP, we managed to achieve high insulating performance with less insulation material. The panel with the flexible, multi-layer aluminium diffusion barrier also makes our pipe extremely compact and easy to handle.

<0.004 w/mK
Revolutionary low
lambda value
of insulation material.

Key facts

- Ecoflex VIP offers a revolutionary low lambda value of insulation material <0,004 W/mK
- Ecoflex VIP has up to 30% smaller diameter compared to conventional soft foam insulated pipes
- Up to 60% reduction in heat loss through VIP technology
- Lower temperature drop of the heating media even over long distances

VIP insulation performance is 10 times better than soft foam insulation and 5 times better than hard foam insulation

Without VIP

Heat loss visualisation of a pipe without VIP material.

For the same heat loss as with VIP, an outer diameter of more than double the size is required.

With VIP

The hybrid insulation of VIP and PE-X material reduces heat emission by up to 60%.

➤ Small diameter. Supreme flexibility.

Incredibly easy to install

Time and space are two important factors in today's construction industry. Ecoflex VIP helps you use both economically. We designed our new pipe to be as flexible as soft foam insulated products, but with a diameter up to 30% smaller. This makes a significant contribution to simplifying the planning of low-temperature networks, making installation more convenient and construction processes faster – even in densely populated areas.

30%
smaller diameter

Key facts

- Faster installation and less on-site disruption
- Savings of up to 60% in installation time compared to steel pipes, and up to 20% compared to hard PUR foam pre-insulated flexible pipes
- Easier handling, even in confined spaces
- Lower installation costs due to the reduced time and labour required
- The proven design of the outer jacket profile can withstand traffic loads of up to 60 tons
- Ecoflex VIP is compatible with all Ecoflex accessories and fittings

➤ Saving resources. Today and tomorrow.

Paving the way for net zero

The European Union is expected to commit to becoming carbon neutral by 2050. District heating is seen as an important contribution to this net-zero target. Ecoflex VIP can help make such networks more sustainable and future-proof. Our pipes enable the effective use of energy and help operators reduce thermal waste. Ecoflex VIP has a ~20% lower CO₂ footprint than conventional products with comparable insulation performance.

Key facts

- Fewer oil-based materials used during production
- Lower CO₂ emissions over the life cycle of the installation.
- Positive contribution to meeting global sustainability standards.

~20%
lower CO₂ footprint

➤ From design. To installation.

Uponor offers a wide range of services to support our customers in the installation of Ecoflex VIP. With over 30 years of experience and more than 35 million metres of pipe installed worldwide, our service teams can support every phase of a project with digital training, design services, product delivery and on-site support.

And with a local presence in most European markets, there is always an Uponor sales unit near you.

Our services include:

High availability of the complete system, direct deliveries to the construction site.

Design support and AutoCAD plug-in software for the easy design of networks and installations.

Installation support on site.

Find out more:

The Ecoflex VIP portfolio contains a comprehensive range of products for both heating and cooling networks as well as for hot water distribution and drinking water. The pipes are fully compatible with the proven Ecoflex system fittings and accessories. For details, refer to the technical information.

For further information on Ecoflex VIP and our other products and services, please contact our sales representative.
